

Introduction to QtSpim

- 1- Open a new Notepad file.
- 2- Write the code in the Notepad file.

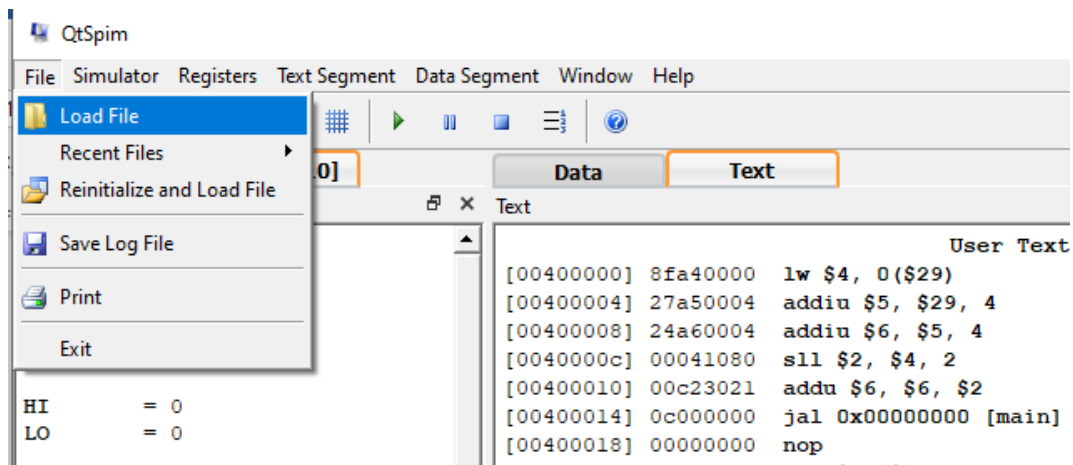

```
Code1.s - Notepad
File Edit Format View Help
.global main
.text
main:
li $s0,2
li $s1,3
li $s2,0
add $s2,$s0,$s1
|
li $v0,10
syscall
```

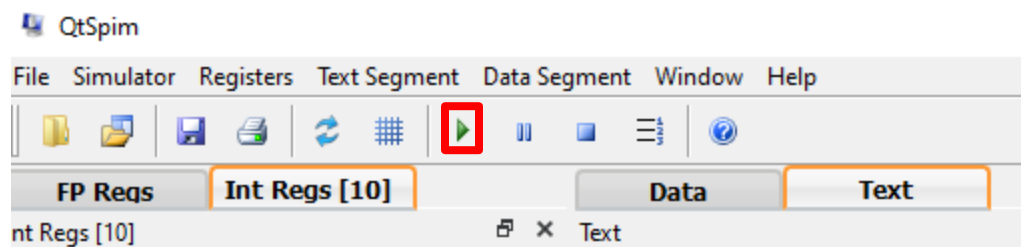

- 3- Save the file with extension “.s” for example “Code1.s”.

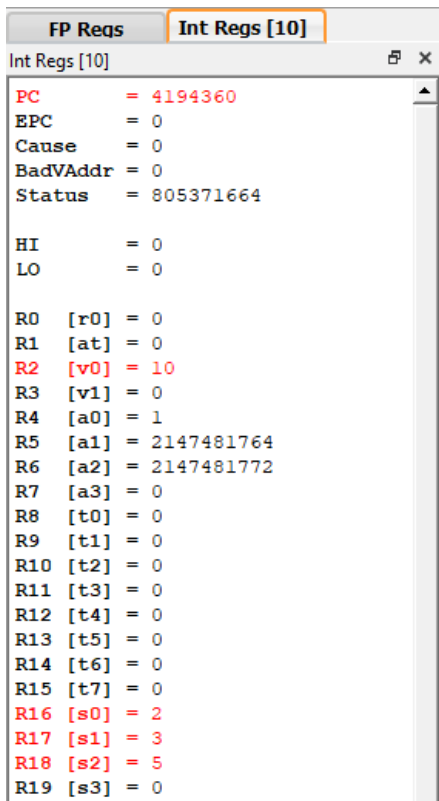

4- Open QtSpim then load your file.

5- To Run your code, press the run button.

6- The Results of the running are on the left side of the screen.

7- You should fix the errors in the Notepad files and to run again you should reinitialize the simulator.
